

February 2, 2019 - Moving on Up the Road in the Robbins Fiberhood

Yes! We are on the move once more installing our Mainline Fiber cable on Robbins Road.

On the 25th of January we completed install and testing of our new Fiber Switch that is powering our new Fiber Mainline that will supercharge our bandwidth across the island. You can see the new switch gear box on the Robbins & Beach PUD pole. It is the top big box above the big box with our name on it (which houses the Robbins Fiberhood Fiber Head-End electronics).

On January 28, 2019 we completed the installation of the first of our FTTH Distribution Boxes going up over the Robbins Road hill along with our new Fiber MainLine cable. I am pleased to make note that we have folks already committed for half of the FTTH connections of this box!

I should note at this point that there is mounting pressure for Marrowstone Wireless to provide our services outside of the Island. Though tempting as this might be, our first commitment is to the Marrowstone community. We so value Island Folks and the support they continue to show us as we stay committed to them both with

continued progress and steadfast support I am pleased to say, we are here to stay!

Peace, David
David G. Brader, President
