

## August 2, 2019 - Fiber delayed but, we have used the time to expand off Island!

Sometimes I feel like a salmon swimming up rapids to spawn! The new Fiber cable did arrive on July 7th in the Port of Seattle but, after it had been cleared by U.S. Customs, import fees paid and the shipment released for pickup the bonded warehouse loaded all three Fiber cable spools on an 18-wheeler headed East! We did not find out until Kevin and Johnny took Johnny's diesel truck to Kent, WA to get the shipment. After four hours of searching the warehouse the guys came home empty...

The warehouse finally found the shipment back East and reshipped it direct to us. It arrived on this past Monday and we got a start at hanging the first spool making it to 410 E. Marrowstone Road.

While waiting for the Fiber we were contacted by a potential client living on Olele Point at the South end of Oak Bay wanting to know if we had service to reach her location! We quickly recognized that we could actually cover the entire Oak Bay shoreline and the ridge overlooking Oak Bay from a present client's property on the South shore of Marrowstone and direct feed the wireless transmitter off the NoaNet fiber connection located at Robbins & Beach! Should be a super service.

At 10:15am this morning the new Marrowstone Wireless Oak Bay Access Point was fired up for the first time and can service any property that can see the South end of Marrowstone where the red star is on the map above. Now, back to the Fiber...

Peace, David
